

EQUICURE S: Overview

WHAT IS THE EQUICURE S?

EQUICURE S is a prevention and care cream for hoof cracks.

The concept of **EQUICURE S** constitutes a true innovation in the care of the hoof's field. Besides being a care product for hoof cracks, it's the first product that prevents against the appearance of hoof cracks after a coronary band injury.

Formulation of **EQUICURE S** is completely innovative. The best vegetables and seashells active components were chosen and combined with a high quality cream to allow a precaution and care effect.

WHEN USED THE EQUICURE S?

The aim of **EQUICURE S** is to prevent the hoof cracks after a coronary band injury. If one or several cracks are already showing up, **EQUICURE S** allows it to get rid of it fast.

Therefore **EQUICURE S** is recommended when:

- The coronary band which produces the hoof horn was injured (shock, cut ...).
- Cracks are already showing up in the hoof wall.

What is a hoof crack?

What is a hoof crack?

It is a split in the hoof wall.

- Coronary cracks: Trauma can interrupt the secretion of the horn by the cells of the coronary band and so, results in cracks which start at the top of the hoof and splits down.
- Low cracks: The cracks extending from the ground surface upward are common problems in horse's hooves which are not trimmed or excessively dry.

Severe lameness can be produced if bacteria enter the cracks and gain access to the sensitive structures of the foot causing infection.

What are the properties of Equicure S ?

- **EQUICURE S** heals rapidly the band injuries, reducing the risk of appearance of coronary cracks,
- **EQUICURE S** gives back to the cells all their horn's production capacities,

EQUICURE S prevents cracks after a coronary band injury.

- **EQUICURE S** stimulates the horn growth,

EQUICURE S clears out fast from crack by speeding up the hoof growth.

What are the advantages of Equicure S?

- *An innovative product:* **EQUICURE S** is the only product on the market which prevents the appearance of cracks.
- *An easy product of use:* **Equicure S** penetrates rapidly. It's painless for the animal.
- *A non-doping product:* **EQUICURE S** does not turn the animal positive during an anti-doping control.

Blacksmiths surgeons won over :

Blacksmiths know the complications which can follow the appearance of cracks (distortion of the hoof, pain for the animal, horse unridable...). They appreciate to have a product against the band injury, reducing efficiently the risk of crack's formation. They are impressed by the good results given by **Equicure S** on the existent coronary cracks. The fact is that the animal tolerates perfectly the **Equicure S**. According to them it is a very good product because it makes care easier.

How to use the EQUICURE S?

In the case of a band injury, apply a fine layer of **Equicure S** on the injured zone, once a day, by massaging, until of the wound is healed.

To speed up the horn growth, apply the **Equicure S** three times a week by massaging the coronary band.
