

### EQUICURE OINTMENTS: Overview

Equicure ointments have been formulated for regular maintenance and care for hooves.

The blond ointment is for hooves with normal to hard horn and the black ointment is recommended for hooves with normal to soft horn.

To cater for different types of hoof, the formulas of our ointments have been developed and adapted to the different types of horse's horn.

The formulas of these ointments are made from natural oils, rich in poly-unsaturated fatty acids, lanolin and other moisturizing compounds. For more performance, our formulas are enriched with vitamins A, D3, E, Omega 3 and 6.

The black ointment also contains

Norwegian pine tar.

- The Norwegian pine tar contained in the black ointment formula also has a drying and antiseptic action.

### What are the advantages of Equicure ointments?

- *Practical products:* they keep their consistency in the summer and winter, easiness of extraction and application.
- *Easy products to use:* the ointments adhere perfectly to the horn during application.
- *Aesthetic products:* leave a beautiful color on the hoof.
- *"2 in 1":* each ointment gives care and maintenance all in one product.

#### Vitamins and Omega 3 and 6

The presence of vitamins A, D3 and E encourages energizing metabolism, reinforces protective efficiency and stimulates cellular growth activity. The sum total therefore allows efficient hoof growth and protects it from exterior injury

Omega 3 and 6 encourages good keratinization and hydration of the horn.

### How should EQUICURE ointments be used?

- On clean, dry hooves: apply with a brush on the wall, the sole, the frog, and bars.
- Recommended application: 3 times per week and more if necessary.

If cracks appear, the application of Equicure S is recommended on the coronary band.

### When should EQUICURE ointments be used?

Our ointments are used:

- To maintain regularly healthy hooves. The blond and black ointments are perfectly adapted for optimal maintenance of the hoof horn.
- Complementary hoof care :
  - - If the horn is crumbly, hard or brittle, the blond ointment is recommended.
  - - If the horn is too soft or soggy, the black ointment is recommended.

### What are the properties of Equicure ointments?

- Equicure ointments maintain the natural suppleness and resistance qualities of the horn.
- Restore the protective lipidic contents of the horn and preserve a balanced hydration of the hoof, reducing trans-epidermic water-loss.
- They give natural protection against exterior aggressions and are very efficient on the most fragile parts (frogs, bars, ...).
