

ENRICHED POULTICE: Overview

What is EQUICURE enriched poultice?

The Equicure enriched poultice is a treatment for muscles, tendons and joints in horses.

It has been designed and formulated from very high quality green clay containing a strong concentration of mineral salts and trace - elements.

To reinforce the effectiveness of our poultice, we have added natural plant extracts of Harpagophytum and Siberian ginseng which encourage the recuperation process.

What are the advantages of Equicure enriched poultice?

- *An easy product to use:* the poultice easily applied to the areas needing relief.
- *A rapid-acting product:* the poultice rapidly relieves pain and gives better recovery.
- *A product that can be used for all:* the poultice can be used during gestation, nursing and for very young horses.
- *A non-doping product:* enriched poultice can be used during periods of racing. It doesn't contain doping components.

How should EQUICURE enriched poultice be used?

By a local application of a thick layer (at least 1 cm) on the coat on the affected areas (tendons, muscles and joints) which has been previously wetted. Leave on from 2 hours to a night according to the degree of tiredness of the animal.

To stop the plaster drying out too quickly, bind it, without squeezing the dressing, with very damp gauze or fine linen, then bandage altogether.

Harpagophytum and ginseng Siberian

- Harpagophytum reduces articular, muscle and tendon pain caused by exertion.
- Siberian ginseng assists physical effort, increases resistance capacity and improves recuperation after exertion.
