

EQUICURE BIOREGULATOR: Overview

What is EQUICURE BIOREGULATOR?

EQUICURE BIOREGULATOR is a food supplement in concentrated nutritive paste form designed to smooth the digestive environment of the horse.

Formulation of EQUICURE BIOREGULATOR combines several natural compounds. So, selected vegetable enzymes and live lactic bacteria were designed to improve the digestion.

When should EQUICURE BIOREGULATOR be used ?

The digestion in Horse is a complex and delicate process that can be disrupted by the environment and the modern management of the Horses: stress, feeding, antibiotic therapy, deworming ...

EQUICURE BIOREGULATOR should be used each time that the digestive balance is (or could be) disturbed :

- Digestive disorders (colic, diarrhea, ...)
- Before stress (travel, competition, ...)
- Antibiotic therapy, deworming
- After the birth
- During reproduction period
- To help the recuperation after exertion.

What are properties of EQUICURE BIOREGULATOR?

- **EQUICURE BIOREGULATOR** supports the digestion process in the small intestine thanks to its enzymatic compounds (amylases, protéases, cellulases, lipases ...).
- **EQUICURE BIOREGULATOR** restore and reinforce the growth of the lactic microflora taking part in digestion. Live lactic bacteria were selected with care (naturally occurring bacteria, resistant to the acidity of the stomach and to the digestive enzymes). They help to the microbial digestion in the large intestine. Alive, they are useful without delay.

- **EQUICURE BIOREGULATOR** efficiently complete the alimentation. The nutriment complex (amino acid, glucide, trace elements, ...) is directly assimilated by the horse.
- **EQUICURE BIOREGULATOR** prevents colic, diarrhea and digestive disorders.

What are the advantages of EQUICURE BIOREGULATOR ?

- *An effective product:* By optimizing the digestive balance, EQUICURE BIOREGULATOR improves the overall good health of your horse. Quieter, less stressed, it benefits entirely from its food.
- *An easy to use product:* the oral syringe packaging is designed to be easily swallowed by the animal, without dilution, nor particular manipulation.
- *A non-doping product:* EQUICURE BIOREGULATOR doesn't show up positive in the animal during a doping test and can therefore be used in competition.

How should EQUICURE BIOREGULATOR be used?

Place the injector at the corner of the animal's mouth and press the piston to empty its content.

The quantity and the schedule of the dose swing according to the indications and the horse age.

CONDITIONS	FOALS	HORSES
After the birth	10 ml : 1 st , 2 nd and 7 th day	
Digestive disorders	10 ml : morning and night during 6 days, then 1 time/day (2 to 5 days)	20 ml : morning and night during 6 days, then 1 time/day (2 to 5 days)
Before stressful conditions (Transportation/competition)	10 ml, 12h before	20 ml, 12h before the stress
With an antibiotic therapy	10 ml/day	20 ml/day
After deworming	10 ml	20 ml

Packaging: box of 4 injectors of 20 ml
